

MAKING AN ENVIRONMENTAL DIFFERENCE

WHAT DOES A REDUCTION OF 150 TONNES OF ANNUAL CO2 EMISSIONS MEAN IN REAL TERMS?

Wykamol set themselves a target to reduce their carbon emissions by 150 tonnes per year, and they are well into their journey with a combination of factory solar panels, membrane collection & recycling scheme and a fully electric field fleet.

An annual reduction of 150 tonnes of CO2 emissions equates to :-

- 7,750 cups of tea per day
- Driving 18 times around the earth in a diesel car.
- A reduction in arctic ice melt equivalent to the area of 7 average UK homes.

Sitting back and doing nothing is no longer an option, and Wykamol are making a difference with their ECO commitment.

Contact Wykamol today on 0845 400 6666 to be part of their ECO journey, and help to make a global CO2 difference.
