N&C

Founded in 1875

The Nicholls and Clarke Group of Companies is a business dedicated to the manufacture and supply of the finest building materials. Extensive research allows each company within the group to develop aspirational and affordable products that meet the ever changing demands of todays design conscious consumer. Inspired by nature, culture and trends from around the world, we let our creativity shine in a wide and versatile assortment of tiles and bathrooms. Distinctive and highly original designs side by side with more conservative and traditional ones meet the challenge of everyones individual taste.

We use our 130 year pedigree and innovative technologies to develop our distinctive style; we don't work to a set formula rather a combination of instinct and memory; we anticipate the future and remember the past.

# key features

The following symbols are used throughout this catalogue.

**Gloss** – These tiles are finished with an attractive gloss glaze, that is hardwearing & easy to keep clean.

**Matt** – Tiles with a more satin or matt finish, that create a modern and more contemporary feel.

These tiles or natural stones have an attractive satin finish.

**Rectified** – These tiles have their edges mechanically ground as part of the manufacturing process, which creates near perfect 90° angles on all edges. When fitted professionally an almost plane like surface can be created which is enhanced with the use of a minimal grout joint.

**Anti-Slip** – These floor tiles have an increased degree of slip - resistance & therefore may reduce the risk of slippage.

**Porcelain** – These tiles are frost resistant & extremely strong. Some are also suitable for certain exterior situations.

These contemporary tiles are manufactured from Glass. Refer to the latest N&C Nicobond 'How to Tile Guide' for installation instructions.

**Matching Wall & Floors**-These tile ranges comprise of matching wall & floor tiles in the same colour.

**Polished** – The surface of porcelain tiles can be polished as a further part of the manufacturing process. This leaves the tiles with a highly reflective lustrous finish.

**Domestic use only** – These floor tiles are perfectly suited for interior use within the home, but are not suitable for either exterior or commercial application.

**Plain & Pattern Pricing** – These ranges of tiles feature some decorated pieces that add no additional cost to that of just using plain tiles.

**Natural** – These tiles are part of our natural stone collection and could be marble, slate or limestone. Please contact one of our branches for advice on specific specification. NB: Some of these materials require additional sealing & maintenance.

**Suitable for Commercial use.** Please refer regarding project type

## Abrasion resistance of glazed floor tiles (PEI)

This approximate classification is given for guidance only. It should not be taken to provide accurate product specifications for specific requirements.

- Class 0** Glazed tiles in this class are not recommended for use on floors.
- Class 1** Floor coverings in areas that are walked on essentially with soft soled footwear or bare feet without scratching dirt (for example residential bathroom and bedrooms without direct access from the outside).
- Class 2** Floor coverings in areas that are walked on by soft soled or normal footwear with, at the most, occasional small amounts of scratching dirt (for example rooms in the living areas of homes but with the exception of kitchens, entrances and other rooms which may have lot of traffic). This does not apply to abnormal footwear, for example hobnailed boots.
- Class 3** Floor coverings in areas that, with normal footwear, are walked on more often with small amounts of scratching dirt (for example residential kitchens, halls and corridors). This does not apply to normal footwear, for example hobnailed boots.
- Class 4** Floor coverings that are walked on by regular traffic with some scratching dirt, so that the conditions are more severe than Class 3 (for example conservatories).
- Class 5** Floor coverings that are subject to severe pedestrian traffic over sustained periods with some scratching dirt, so that the conditions are the most severe for which glazed floor tiles may be suitable (for example public areas such as restaurant floors, office internal walkways and reception areas).

This classification is valid for the given applications in normal conditions. Consideration should be given to footwear, type of traffic and cleaning methods expected and the floors should be adequately protected against scratching, dirt at the entrance to the buildings by interposing footwear cleaning devices.

# palmira

Palmira combines the excellent features of porcelain tiles with a horizontal extrusion manufacturing process obtaining a unique authentic look with outstanding technical performance.

**Natural finishes where each piece is unique.**

Worn-out edges, authentic natural stone and colour variations and unique surface relief for each tile give palmira the rustic touch and authenticity of mother nature.

**Versatility for inside or outside spaces.**

Living rooms, bathrooms, driveways, terraces, kitchens, facades, swimming-pools... Palmira's tiles can be used for any residential or commercial surface, both inside or outside, due to its multiple range in designs, textures and technical features.

# live tile

Please refer to the latest N&C Nicobond 'How to Tile Guide' for installation instructions.

N&C Live Tile is a range of glass and ceramic tiles for walls, floors, mosaics and facades (please note facades are available to special order as they require a further manufacturing process within our factory). This unique and beautiful product is the result of innovative technology combined with Bohemian glass craftsmanship. The lenticular technology used creates tiles with a holographic beauty which produce a shimmering effect on walls or floors. Available in a wide range of colours and sizes the products can be used on their own or combined with ceramics or natural stone to create stunning designs.

# bespoke natural stone

Throughout the history of mankind Natural Stone has been used by craftsmen to create some of the marvels of the ancient world.

Different marbles, metamorphic rocks formed by the intensity of the primeval forces of nature, have become a symbol par excellence of nobility and quality

Today we can combine traditional craftsmanship and modern technology to use natural materials to create a contemporary vision for use on walls and floors to create homes and public places with the taste of exclusiveness and individual personality.

The options available are virtually limitless and the following pages are merely a suggestion of the most popular formats. Using the N&C Nicobond bespoke natural stone collection allows you to create unique environments that reflect your personal style.

1. Choose your colour.
2. Choose your size format.
3. Choose your thickness (normally 10mm walls/20mm floors)
4. Choose your decorative, complimentary pieces (ie skirting tiles, mosaics etc)
5. Choose your vanity tops/furniture
6. Submit your information for a quotation.

# taps and mixers

Water saving has become a priority in recent years, with our ever changing climate. However more and more high pressure plumbing systems are being installed. Our unique **ECOFLOW** cartridge allows high pressure flow rates to be reduced after installation at the turn of a screw. Providing instant water saving in minutes.

## quinto **ECOFLOW**

FLOW REGULATION RANGE

flow reduction chart

# shower enclosures & trays

We provide enclosures for all applications with matching shower trays. Our screens and enclosures are manufactured using toughened safety glass which complies to EN12150. Shower screens and enclosures are tested in accordance with BS EN14428 - shower enclosures, functional requirements and test methods.

# sound reduction

To meet the requirements of the Building regulations 2000 approved document E, resistance to the passage of sound 2003 edition and amendments 2004.

Fit the Nicobond Sound reduction System for concrete floors (Type1).

Once installed, the sound reduction through a tiled floor will exceed Document E requirements. As Nicobond, Acoustic Matting achieves a reduction of 20db.

1. Ceiling
2. Floor Type 1 - Concrete base
3. Apply a layer of general purpose vinyl floor adhesive to concrete base.
4. Whilst the adhesive is still wet lay the Nicobond Acoustic Mat and smooth out with a light roller to remove any air bubbles or voids.
5. Cover joints between mats with crack tape to prevent tile adhesive penetrating to the base which could cause a sound bridge.
6. Insert polyethylene backing rods around the perimeter at wall/floor junctions to isolate the floor covering.
7. Apply a layer of the recommended adhesive onto the mat and trowel out as usual, ensuring solid bedding of the tiles.
8. Press tiles into the recommended adhesive with a slight sliding or twisting action.
9. Fill joints between tiles using recommended grout.

*\*Sound transmission is a complex subject and the Nicobond method needs to be part of a complete building 'package' of sound reduction to provide 'adequate' insulation.*

Contact your local branch for further details.

# under tile heating

N&C Nicobond offer undertile cable and matting systems that create warm tiled floors at highly competitive rates.

Both systems are BEAB approved and are very economical. Our systems can even allow the removal of radiators in bathrooms and fan heaters in conservatories.

Cable System

Matting System

# DDA

## Disability Discrimination Act

**Independent living solutions**

N&C Phlexicare can help by providing creative and cost effective solutions to enable you to meet the requirements of the Disability Discrimination Act.

Access to buildings

*"Doing nothing is not an option"*  
Maria Eagle MP, Minister for Disabled People.

Accessible kitchens

Accessible bathrooms

The Disability Discrimination Act affects all service providers. Determining just what steps you will have to take to make your business compliant is not easy.

Contact your local branch for further details.

## wet room level access showering

N&C Nicobond offers a comprehensive collection of pre-formed level access shower trays that are manufactured with built-in falls to ensure that correct drainage occurs.

Contact your local branch for further details.

# ready made pipe covers

These very strong, lightweight pipe covers can be installed in minutes and are the perfect surface to receive ceramic tiling.

- Cut with a Stanley knife
- PU gunned adhesive
- Once in place tile after 30 minutes
- Perfect 90° angle
- Savings of up to 50% can be achieved compared to the costs of traditional boxing in
- Special order sizes available (subject to volume)
- Available ex-stock 150 x 150mm and 200 x 200mm

Contact your local branch for further details.

## buy confidence, fit the system

# ready formed bath panelling systems

Our range of pre-formed bath panelling systems allow a perfect and rapid fit adding style to any bath. A totally rigid fit is created which is then a perfect substrate for tiling with an enhanced Nicobond tile adhesive.

Specials can be manufactured to suit any shape of bath.

Contact your local branch for further details.

# curved specials

Nicobond Lux is extremely versatile and can be formed to suit any type of curved design. Curved showers, bath panels and even vanity furniture can be manufactured to order.

Once tiled these curved items become the major focal point within any room.

Stand alone steam rooms and a multitude of other designs can be manufactured to suit private gymnasiums and Wellness centres.

Contact your local branch for further details.

# total tanking solutions

Nicobond Lux tanking systems will stop water within bathrooms and ensuite leaking and flooding a domestic house or a block of apartments. The systems for both solid and stud/timber substrates are featured in the N&C Nicobond 'How to Tile Guide'.

## Nicobond Lux Tanking System to Solid Construction Walls and Floors

1. Gypsum plastered blockwork, cement rendered walls and concrete or screeded floors.
2. Apply the Nicobond Waterproofing Mortar to the floor surface in either a single coat or in two coats. The minimum thickness of the overall layer is 2mm. If applying in two coats the first layer can be applied with a roller or smoothing trowel; the second coat should always be with a smoothing trowel. To achieve a smoothable consistency the proportion of water in the mix for the first layer can be increased by about 10%. If the minimum thickness of 2mm is applied in a single coat use the Nicobond Mosaic Trowel (4mm comb) and then draw the teeth flat to ensure an even 2mm layer. Protect the Nicobond Waterproofing Mortar from sunlight and draughts during and after application.
3. Install the DRY-DB sealing tape or other DRY-DB accessories to edges or around fittings as required ensuring the tapes are placed into the wet Waterproofing Mortar and smoothed out as above.
4. Allow the sealed area to dry for at least 24 hours before installing the tiles.
5. Press the tiles into the recommended adhesive with a slight sliding or twisting action.
6. Fill joints between tiles using the recommended grout.

## Nicobond Lux Tanking System to Stud Walls and Timber Floors

1. Wallboards, plasterboard studded walls, tongue and groove/chipboard floor overlaid with minimum 15mm wbp plywood substrate.
- 2a. Apply a thin even layer of Nicobond Rapidflex to the wall surface using the Nicobond Mosaic Trowel (4mm comb).
- 2b. Apply a thin even layer of Nicobond Pourable Adhesive to the floor surface using the Nicobond Mosaic Trowel (4mm comb).
3. Press the Nicobond Lux DRY-DF sealing film onto the adhesive, avoid air bubbles or wrinkles by smoothing out with a smoothing trowel or paint roller.
4. Overlap joints in the film by 50 – 100mm, do not apply adhesive under the overlap until the adhesive has set.
5. Avoid walking on the sealing film for at least 4 hours.
6. Seal the joints by carefully applying Nicobond Waterproofing Mortar using a paintbrush or spatula.
7. Install the DRY-DB sealing tape or other DRY-DB accessories to edges or around fittings as required ensuring the tapes are placed into the wet Waterproofing Mortar and smoothed out as above.
8. Allow the sealed area to dry for at least 24 hours before installing the tiles.
9. Press the tiles into the recommended adhesive with a slight sliding or twisting action.
10. Fill joints between tiles using the recommended grout.

The professional choice, N&C Nicobond has been manufacturing high quality tile adhesives, grouting compounds and screeds for over 50 years. Our comprehensive range of products exceed all BS EN standards and offer peace of mind at a competitive rate.

Contact your local branch for further details.

## IMPORTANT NOTES

### Shade Variation

During the manufacture of all ceramic tiles some variation in shade, pattern & size can occur. It is common practice to check batch numbers before hanging wallpaper, please apply the same practice prior to fixing wall & floor tiles. Before fixing wall & floor tiles several cartons should be opened and their contents mixed to create an acceptable finish. If an acceptable blend cannot be created then tiles should not be fixed. Care should be taken to ensure that sufficient tiles have been purchased to complete the job. Tiles purchased may vary in shade to those shown on display boards or in our showrooms.

**N&C Group of Companies cannot accept any liability for wall and floor tiles that have been fixed.**

### Crazing

Some wall tile glazes, especially richer colours and those used to create special features, are subject to crazing. This is an inherent characteristic of glazes and could occur after fixing but will not affect the performance of the tiles.

### Glass, Metal & Highly Decorative Tiles

Care should be taken during fixing & grouting to ensure that the surface of the tiles are not scratched. Clean tiles with a non-abrasive cleaner and cloth.

### Polished Porcelain Tiles

The polishing process of all non-glazed porcelain tiles creates microscopic pores on the surface. If polished tiles are to be used in areas where spills may occur, such as kitchen & bathroom areas or if dark grouts are to be used, we recommend the use of a penetrating sealer such as HG stain protector be applied 2-3 hours prior to grouting.

### Porcelain Tiles

It is important when using different colours of porcelain in one area i.e. a chequer-board effect, that you state this when ordering so that a compatible calibration can be supplied. Orders for such effects can only be accepted on this basis.

### Live Tile

When fixing 'Live Tile' ensure the brand mark on the back of the tile is fixed with the 'lady dancing upright'.

### Natural Stone

All of these ranges are natural and as such, subject to geological variations beyond the control of N&C Nicobond. Variations that can/will occur are colour, texture, surface markings/fossils and size. We remind you that being natural materials all of these ranges experience degrees of porosity, therefore sealing with proprietary solutions is recommended. Natural Stones also experience differing levels of surface hardness and or pitting/hardness, if in doubt please consult us for specific advice.

### Tile Sizes

All sizes in this catalogue are nominal sizes quoted as the nearest metric modular size.

### Scale

The images of tiles shown in this catalogue are representative of the product but are not necessarily to scale.

### Tile Fixing

The N&C Group of Companies recommend that all tiles and natural stones are fixed using only Nicobond Adhesives & Grouting Compounds. Tiles should be fixed in accordance with the latest British Standards & the Nicobond 'How To Tile Guide'. Instructions for use and full specifications of all Nicobond products are available within the specification guide, which is available on request. If you have any doubts then please refer to your local branch.

### Grouting

Before any grout is used, we recommend that a trial be carried out to ensure that staining of the tile or the tile edges does not occur, as N&C Nicobond will not accept responsibility for tile staining. Please note: there are several products in the Nicobond range of coloured grouts that have the same names. Colour variations in shade between products will occur because different raw materials are used.

### Cleaning & Maintenance

Contact your local branch for specific cleaning & maintenance information.

### Wearing Frost Resistant Ceramic Floor Tiles

The British Standard for ceramic tiles, BS6431, recommends the use of the European Tile Manufacturers (CEC) and the European Tile Fixers (EUF) recommendations for use of glazed floor tiles. This system has now been reviewed as a part of the forthcoming International Standard for tiles and this revised system will become the recognised system for the classification of the abrasion resistance of glazed floor tiles. The classifications shown in this catalogue are valid for the given applications in NORMAL CONDITIONS.

### Delivery

Although every effort will be made to keep delivery commitments, neither in the case of breakage in transit nor delay in delivery can we accept any responsibility or liability for lateness. Damages or shortages must be noted on the drivers delivery sheet and confirmed in writing within 3 days. We reserve the right to make an additional charge for delivery if not effected by our own transport.

Our liability for delivery ends on the tailboard of our vehicle. Drivers have instructions to deliver any items they can carry to a site entrance or ground floor entrance of a building, but extra labour should be provided by customers free of charge to assist our drivers to unload heavy or bulk loads. Orders are accepted on this understanding. The N&C Group of Companies recommend that goods are delivered prior to confirming contractor dates. The N&C Group of Companies cannot accept any responsibility for contractor charges if contractors have been booked.

### Liability

We shall not be liable for any consequential or indirect loss suffered by you or any third party in relation to this order and you shall indemnify us in respect of any claim of any person in respect of any such consequential or indirect loss.

### General

Every effort has been made to ensure the accuracy of the information given in this catalogue. The Nicholls & Clarke Group of Companies reserve the right to change specifications and availability without prior notice. The colours shown within this catalogue are as accurate as the limitations of the printing process will allow. Please refer to actual product samples before purchasing.

### Terms & Conditions

Customers are invited to request a full copy of our terms and conditions of trade before they purchase goods and products from The N&C Group of Companies.

Nothing in these statements does or will affect the statutory rights of the consumer.

All Rights Reserved.
