ABOUT VULCAN

Vulcan Architectural is known for its high profile in creating Stair solutions. We add value to clients properties through the careful design and planning with practical advice. Our team is structured to assist in giving a wide range of respected blue chip client's control in their new build or re-development program. We provide the expertise to understand their goals and objectives to create clever, practical and functional walking areas.

CASE STUDY

Address	SPT Underground
Size	DDA/AFA Upgrades to 13 stations
Total project value	Not disclosed
Case	

For this project, Strathclyde Passenger Transport design engineers, wished to upgrade the DDA/AFA facilities at 13 of its subway stations. This included after hours installation of a specially designed tread incorporating Class 1 fire retardant properties. Using Vulcan Tread Systems, we worked closely with the engineers and contractor, carrying out detailed design and cutting procedures, enabling us to advise on substrate and installation practices, ensuring all end results met the high standards expected. Vulcan worked carefully with the contractor, ensuring everything was on site, on time and on budget.
