rethinking stairs

ABOUT VULCAN

Vulcan Architectural is known for its high profile in creating Stair solutions. We add value to clients properties through the careful design and planning with practical advice. Our team is structured to assist in giving a wide range of respected blue chip client's control in their new build or re-development program. We provide the expertise to understand their goals and objectives to create clever, practical and functional walking areas.

CASE STUDY

| | |
|----------------------------|-----------------------------|
| Address | Buckshaw Parkway |
| Size | New Station – Northern Rail |
| Total project value | 6.8 million |
| Case | |

For this project, the design and build team, working on behalf of investors, wished to reopen the Station and its facilities. This included a brand new pedestrian over track bridge to include DDA vision and AFA access. Using Vulcan Tread Systems, we worked closely with the steel engineering team, carrying out drawing surveys, enabling us to advise on substrate installation procedures, ensuring all end results met the high standards expected. Vulcan worked carefully with the Steelwork subcontractors, ensuring everything was on site, on time and on budget.
